

TIPS ON RESEARCH IN CONSCIENTIOLOGY

Eduardo Vicenzi

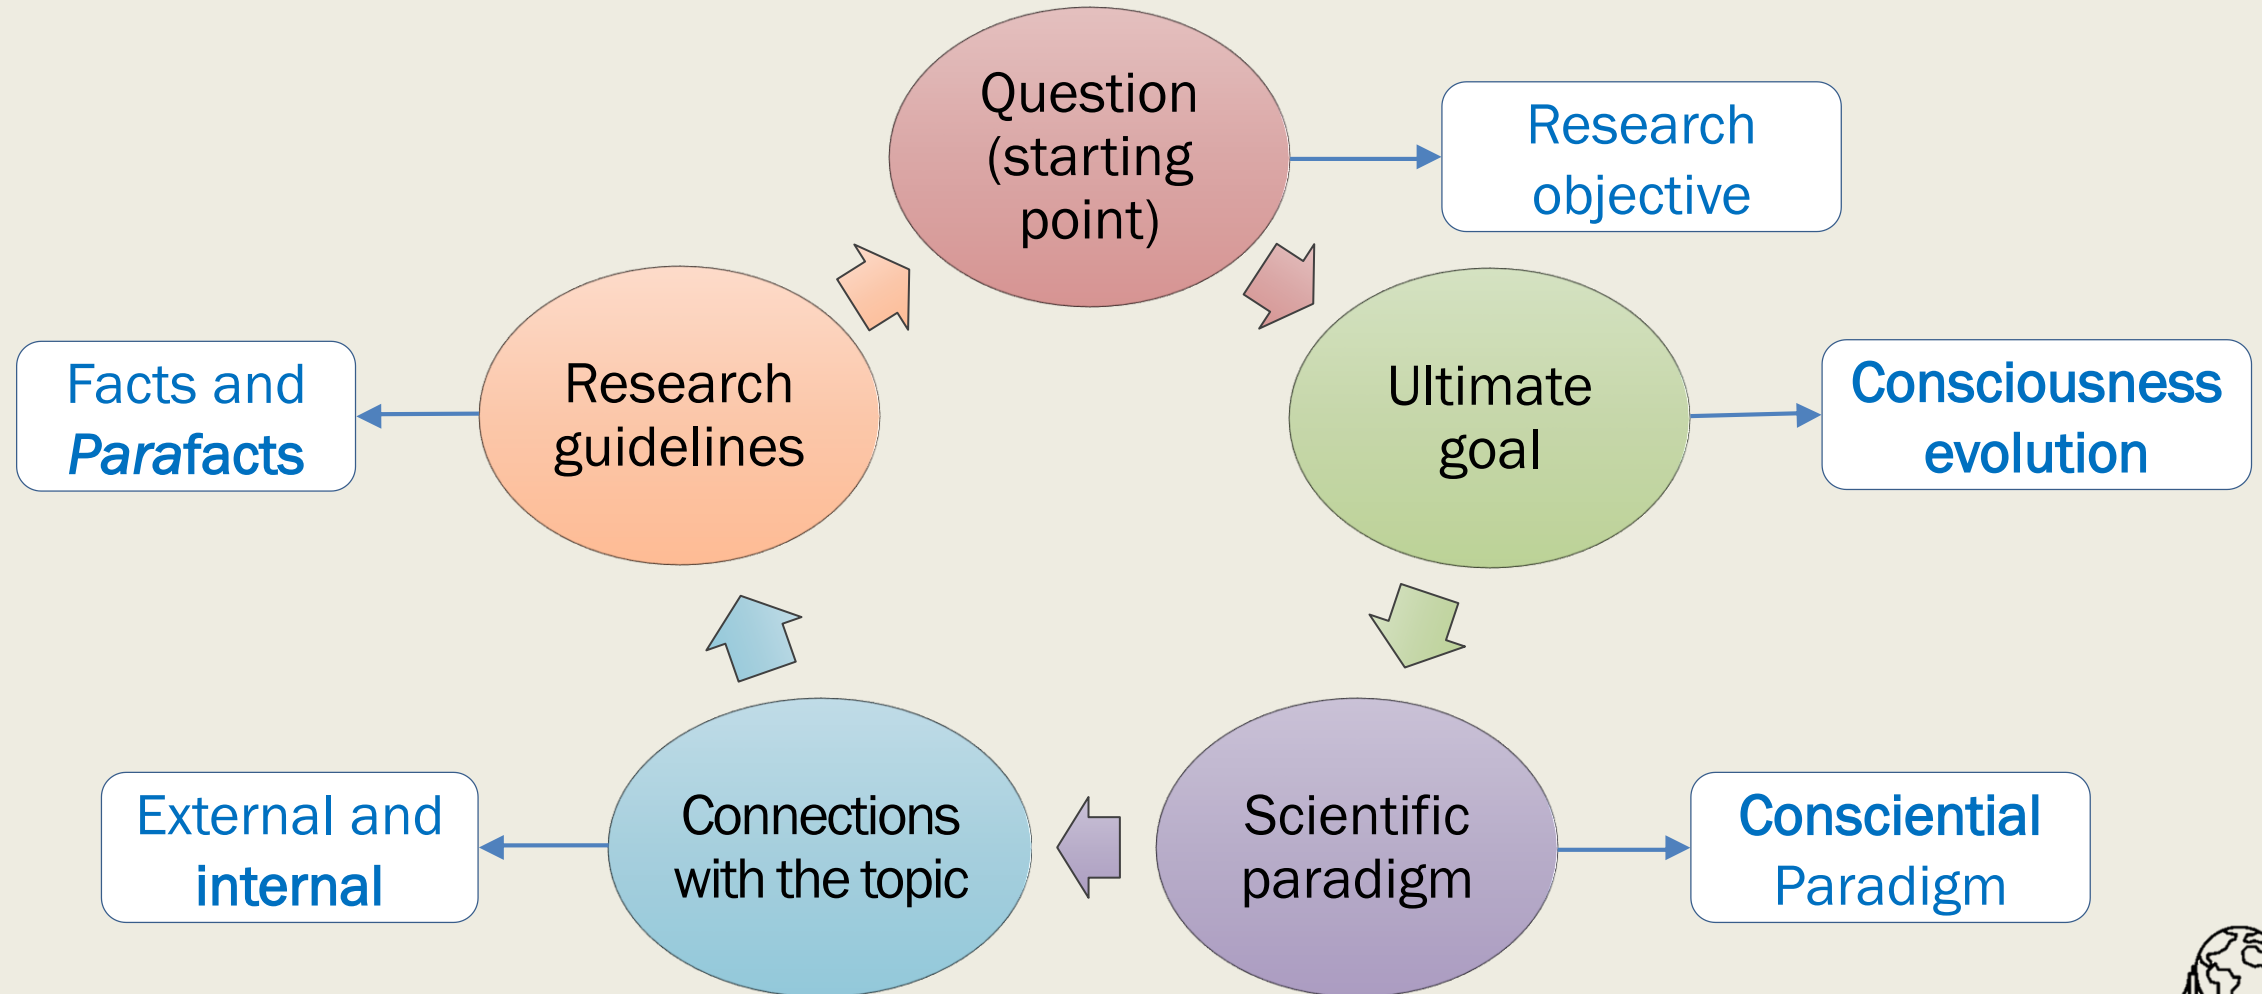

1st Question

What kind of difficulties do you have to handle
the writing project?

Common obstacles

- Lack of self-confidence
- Stay focused on research
- Difficulty in writing

Consciential Research - Characteristics

Assistance Cycle – Clarification Task

1. Problem

- Choice of research topic
- Transforming the problem into a question

2. Research

- Defining the research scope
- Research Methodology

3. Writing

- Target audience
- Writing method

Main questions

1. Why do I want to write a book?

2. How do I choose the research topic?

3. How do I do the research?

4. How can I write it?

1. Why do I want to write a book?

■ External Benefits

- *Assistance to a wider audience (poly-karma) → clarification task.*
- *Development of Conscientiology (specialty).*
- *Extraphysical Commitment → group existential program.*

■ Intraconsciential Benefits

- *To fulfill evolutionary needs*
- *Self-recycling → overcoming weak traits and personal limits.*
- *Self-development → recovery of CONS; improvement of mentalsomatic capacities.*

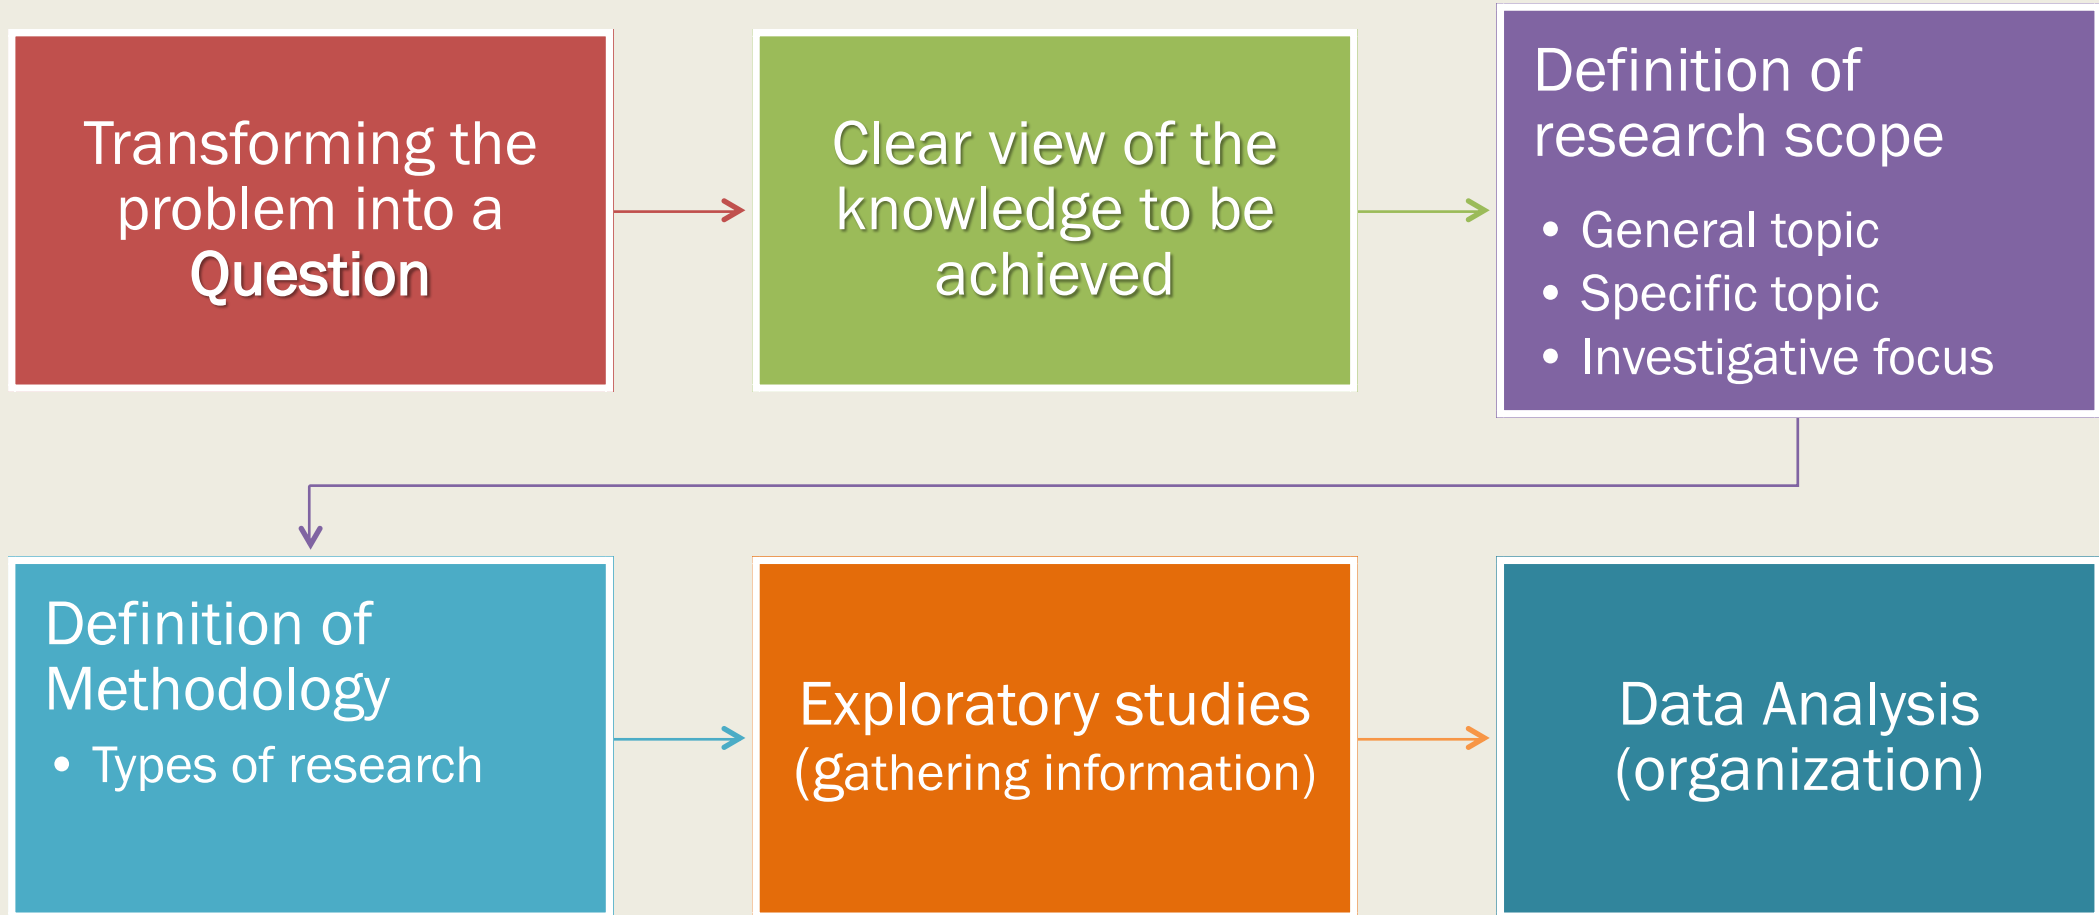

Intentionality

- Hidden intentionality → **Difficulty to hold the priority**
 - *To get rid of self-guilt or compensate mistakes done in the past*
 - *Obligation (under pressure)*
 - *Self-promotion in order to compensate low self-esteem*
- Healthy intentionality
 - *Self-affection → Increase of personal well-being (fulfilled paradigm)*
 - *Fraternity, retribution → targeting on the well-being of others*
 - *Exercising the **right** to write the book → moral authority*

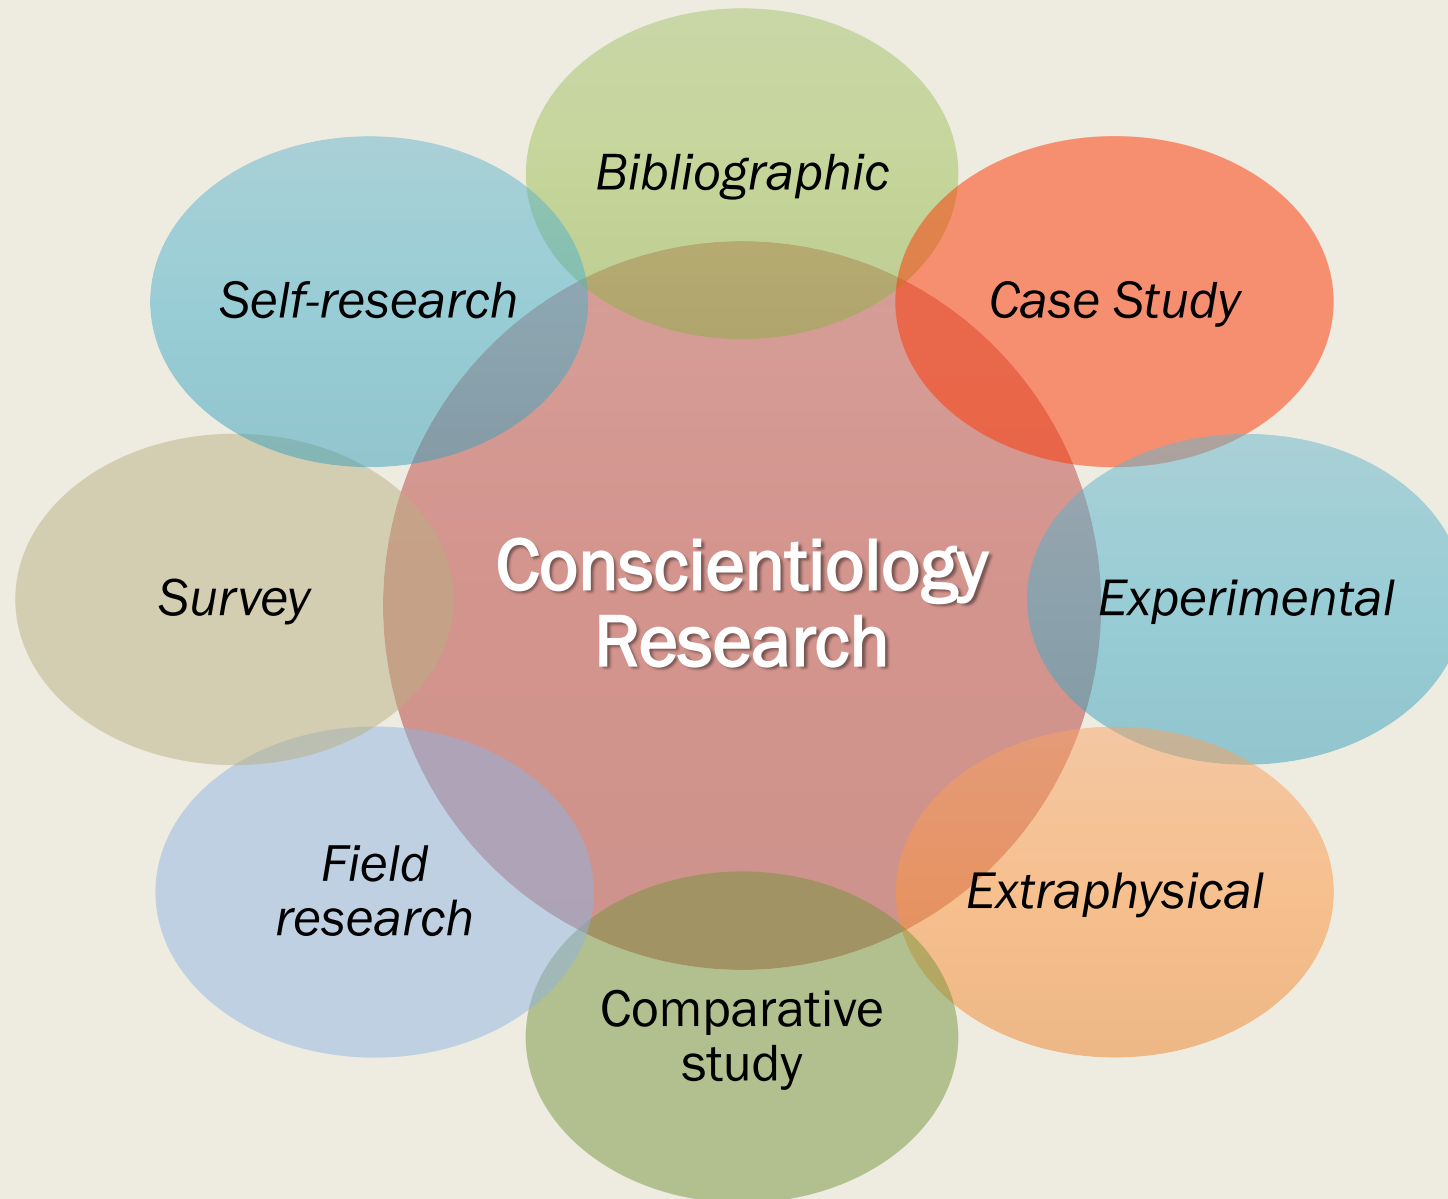

2. How do I choose the research topic?

- Identification of your evolutionary needs → self-knowledge.
- Reflection about affinities and personal interests:
activities, personalities, ideologies, cities/countries, classical holothosenes (enlightenment, renaissance, art, religion, philosophy...)
- Insights, synchronicities, parapsychic perceptions.
- Identification of patterns in the context where you live (*holothosenes*), including group-karma (family, friends and professional colleagues).
- The greatest needs around you → need for assistance.
- If you are not sure ... Just start and be open to change the research subject → it will facilitate extraphysical communication.

3. How do I do the research?

Main Types of Research

Research Tips

1. The research should bring something new
 - *solutions, answers, hypothesis, new approach or ideas.*
2. Avoid theoretical, philosophical or very advanced subjects.
3. Check the veracity of the premises.
4. Focus on the solution instead of the pathology.
5. The research must present clear conclusions → use hypothesis if you cannot prove (deductive) the propositions.

4. How can I write it?

- Objectivity, clarity, simplicity.
- Use logical arguments.
- Logical sequence (development of ideas).
- Do not use unfounded opinion, phrases or words with emotional connotation.
- Use appropriate language → scientific writing
- If you do not have conclusions ... use hypothesis.

Good research!
